Benefits

GoldFax is a full-featured, high performance fax server that works seamlessly with Citrix MetaFrame and Windows Terminal Services, to enable network-based, desktop faxing for the office along with high-volume production for thin client environments.

GoldFax supports all Citrix configurations including Published/Server Applications

Citrix License friendly, no license locking

Server side installation, no client needed

Dormant fax process when not in use for low overhead

Support for Linux/Unix clients

Dedicated server not required

Auto Terminal identification

GoldFax takes full advantage of thin-client technology, regardless of user location, client hardware, client operating system, or bandwidth limitations.

GoldFax is uniquely "Citrix aware." It is specifically engineered to fax-enable the Citrix MetaFrame environment for Shared/Published Applications and Shared/Published Desktops to deliver high performance faxing with low overhead.

GoldFax delivers

With GoldFax, network users will have easy access to desktop faxing. From any application, a user can "print" to GoldFax and have the documents sent to a single contact or multiple contacts, groups of contacts, or lists from any database quickly and seamlessly.

GoldFax Ideal for Citrix Environments

GoldFax completely cleans up the environment, *quickly releasing all resources* after a user ends their session and removing all drivers that could tie up precious, Citrix license slots.

GoldFax Citrix awareness operates invisibly to tie each user to a port so all the internal RPC processes never interfere with each other.

Only a *single copy* of the GoldFax Client user interface is installed on the Citrix server. The client installation program automatically detects the Citrix environment and loads copies of the GoldFax Client into each user profile, giving every user full fax capability from their desktops.

GoldFax server software installs on a Windows server, or even on the Citrix server if you desire. GoldFax can run on a dedicated fax server independent of the thin-client network, and supports high-volume production fax from any system on your network. With GoldFax, you can meet all your enterprise fax needs from one flexible, powerful fax server.

The advanced system architecture of GoldFax provides high-performance with low overhead. Unlike other applications, GoldFax remains in a "sleep" state until a fax document is received or is ready to be sent.

GoldFax User Interface

Support for multiple profiles effectively means that each user manages his or her own desktop fax environment, including basic email-style, GoldFax folders (Inbox, Outbox, Sent Items, and Deleted Items) as well as private folders, a private phone book and can share the public phone book. In addition, individual users or defined workgroups can customize cover pages to meet particular needs, or they can use the standard cover page defined by the administrator.

Server-Side Processing

For high volume users, installing GoldFax on a separate server makes sense for moving the processing workload off the Citrix server. Users submitting jobs for faxing offload image conversion from the Citrix server to the GoldFax server in order to leverage its higher performance. This allows any user to submit high-volume fax broadcasts without impacting anyone else.

Administrator-Friendly Installation

Citrix administrators find GoldFax and its "thin" components easy to install. There are no special commands to run, no scripts to execute, no modifications to the **Citrix MetaFrame** and there are no INI files to manually edit.

GoldFax Efficiencies

Powerful GoldFax features improve efficiency, accelerate fax delivery, and substantially reduce the costs of faxing in and beyond the Citrix network.

Email Faxing

GoldFax also improves user efficiency with connectors for Exchange or SMTP email. Select a contact, create a message, attach documents to be faxed, and send. GoldFax makes it happen.

Using the GoldFax Client

Power users will use the GoldFax Client to make bulk or broadcast faxing easy and efficient. Users simply compose a message, attach desired files from any Windows application, select a recipient, groups of contacts, connect to any ODBC database, and send.

Easy to install, easy to use, and developed for **Citrix MetaFrame**, GoldFax brings industry-leading fax automation to the Citrix desktop.

For More Information

DPD International has been developing office and network software for over 30 years. Our high-performance applications, such as GoldFax, have been deployed and successfully used by thousands of companies and government agencies around the world with over 400,000 end-users.

DPD International is committed to providing best-of-breed software products that are easy-to-use, and we are committed to servicing our customers' needs at every turn. To find out how we can help you, please contact us:
